

Bentonite Barriers

Organizers: Georg Grathoff, University of Greifswald and Stephan Kaufhold, **Bundesanstalt für Geowissenschaften und Rohstoffe (BGR)** Hannover, Germany.

Bentonites as barrier material has been used for decades. Recently with the task on hand how to keep radioactive waste isolated for up to a million years, bentonite barriers have seen a renewed research interest. This session is intended to bring a wide range of bentonite research together studying such topics as the physical and chemical stability, the biological influence on the stability as well as modeling of any kind of bentonite barrier material.
